IPO CHART

Program name:	AddCoinsMastery	
INPUT	**PROCESS**	**OUTPUT**
Hint: What will the user input?	Hint: What is the program going to do with the input information?	Hint: What will the screen display after user input?
- User enters the amount of quarters, dimes, nickels, and pennies	- Program prompts user for amount of each coin - Program stores the number of each coin type in the separate variables: quart, dimes, nicks, and pens - A separate method called getDollarAmount calculates the total using multiplication of the value of the coin, then adds all of the values up. This total is then printed with a dollar sign infront, and it is rounded to 2 decimal points	- Program outputs the total dollar amount of the coins that the user entered
